### Detailed Action

In response to the Amend. A of 6/21/03, the examiner withdraws the prior office action rejection and includes a rejection here under obviousness-type double patenting.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-81 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-81 of U.S. Patent No. 6,265,115. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims to the application recite the same compositions and method steps and the claims in the application are broader than the corresponding claims to the parent patent.

Claims 1-28 of the patent recite depositing a succession of soot particle layers, compared to the application claims 1-28, which simply recite successively depositing soot particles.

Claims 29-35 differ only in the form of the intermediate structure, such as a glass patty in claims 29-35 to be formed into a blank in the patent compared to simply forming a blank in the application.

Claims 40-81 of the patent recite striae limitations such as a blank having parallel layers of striae parallel to the blank surface, while claims 36-81 of the application do not have the striae limitation.

It would be obvious to remove the recited limitations of the patented claims as they do not materially render the claimed invention ineffective with respect to the methods of making and the articles produced.
